

**What**  
*defines us*

# Water Facts

In 2010, the UN recognised the human right to water and sanitation, meaning everyone has the right to sufficient, continuous, safe, acceptable, and affordable water

Although the earth is often called the blue planet, out of all the water on the planet there is less than 1% accessible fresh water for us to use. The Antarctic ice sheet holds about 90 percent of the fresh water that exists on the Earth's surface

As well as the water that comes out of our taps and toilets, there is hidden water in the products we buy. For example, one cotton t-shirt has about 2,700 litres of water embedded in its production, which is around 49 baths full of water

Population growth, rising water use and climate change will increasingly affect future water resources in the UK. If water efficiency action is not increased, the UK could be hit by water shortages by 2050

**Peacock Intl. was established in the Emirate of Sharjah and pioneered in the field of rationalization of water consumption, and as a provider of customer-centric water**

**Greenland has been the company's dedicated platform to take care of all products in this field and has become at the forefront of providing water saving products to a wide range of areas over the years at very reasonable prices and impeccable quality, through solutions and products that can be easily combined with taps and current plumbing systems.**

**As we have kept our eyes on delivering maximum value to clients' investments we never stray from the needs of the industry no matter if they need assistance with residential, commercial or industrial requirements.**
